

CHITRANSH JOSHI

Frontend-first Full-Stack Engineer · 5+ Years
+91 81261 96827 · chitransh.joshi99@gmail.com · github.com/chitranshjoshi99 · Gurugram, India · [Portfolio](#)

PROFESSIONAL SUMMARY

Frontend-first Full-Stack Engineer with 5+ years delivering high-performance web applications across logistics, B2B marketplaces, and edtech. Deep expertise in React, GraphQL, TypeScript, Redux, and Nx monorepos. Consistent track record: page loads cut from 4.2s → 1.1s, CI builds from 18 → 6 min, P95 API latency from 800ms → 120ms. Early adopter of AI-augmented engineering — built and deployed custom Claude-powered tooling that accelerated team-wide code reviews.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, HTML5/CSS3
Frameworks	React.js, Next.js, GatsbyJS, Vue.js, Node.js
State / Data	Redux, Redux-Saga, Zustand, Apollo Client, GraphQL, REST
Tooling	Nx, Webpack, Vite, GraphQL Codegen, Cypress, ArgoCD, Jenkins, GitHub Actions
Video/Stream	HLS.js, 100ms SDK (WebRTC), HTML5 Video API, Adaptive Bitrate (ABR), HLS/MPEG-DASH
Infra / DB	PostgreSQL, Datadog, Jira, Confluence, BitBucket · MUI, Tailwind, styled-components
AI Tooling	Claude Code, Claude API, Custom AI Skills

WORK EXPERIENCE

Nivoda LLP Software Development Engineer II | May 2024 – Apr 2026 · Mumbai (Remote)

- AI-augmented dev: built custom **Claude Code** skills for automated code reviews and test verification — pioneered AI tooling adoption as the eng org scaled into emerging markets.
- Monorepo architecture: architected Nx + React monolith with **GraphQL codegen** workflows enforcing type-safety across B2B diamond trading applications spanning 40+ countries.
- CI/CD: configured ArgoCD + Jenkins across 8+ apps; cut average build times **18 min → 6 min via Nx** affected-build and remote caching.
- Order performance: refactored data-fetching for 10,000+ monthly transactions — **page load 4.2s → 1.1s** via pagination and query optimisation.
- GraphQL & API: cursor-based pagination on high-traffic endpoints reduced backend query time ~70%, eliminated timeouts on **datasets exceeding 50,000 rows**.
- PostgreSQL: composite indexes and query restructuring on 5M+ row tables cut P95 API response from **800ms → 120ms**.
- Scan-based shipment platform: barcode-driven logistics system for high-value international diamond shipments — **reduced processing errors ~40%**.
- Delivery hub dashboards: virtualised lists and memoisation **improved rendering performance ~45%** across 30+ global logistics corridors.
- TypeScript migration: led full monorepo migration, **reducing frontend bugs 25%**; component library published as npm packages **increased reusability ~30%**.

Delhivery Pvt. Ltd. Software Development Engineer I | Aug 2022 – Apr 2024 · Gurugram

- Modularised monolithic frontend monorepo into independent apps (Orders, Shipments, Users, Routes, Maps) + shared MUI component library — **cut deployment times 40%**.
- Multi-provider maps: tier-based integration across Google Maps, OSM, MapMyIndia, HereMaps with dynamic switching — reduced operational costs up to **35% for SMB clients**.
- Real-time tracking: **WebSocket-driven live shipment** interfaces across 10,000+ daily shipments; improved exception response times ~50%.
- Performance: code-splitting, lazy loading, memoisation **reduced JS bundle size ~42%**; Jest/RTL suites achieved **70%+ coverage**, cutting regression defects ~30%.
- Accessibility: raised Lighthouse a11y score 62 → 94 via WCAG 2.1 AA audit (keyboard nav, ARIA, colour contrast).
- Schema-driven forms framework supporting customisable order/user schemas reduced non-standard onboarding efforts ~25%.

Classplus (Bunch Microtechnologies) Software Engineer, Frontend | Dec 2020 – Aug 2022 · Noida

- Payment flows: architected end-to-end **Redux + Redux-Saga** payment system for the Content Store — now the platform's primary revenue-generating cohort.
- Next.js migration: led content store migration to Web View with deeplink bridges to native APIs for seamless offline content on Android/iOS.
- Live streaming: integrated **100ms WebRTC SDK** for real-time interactive classes (200–500 concurrent viewers) with reconnection logic handling mid-session drops.
- HLS video player: custom HLS.js player with ABR logic — reduced mid-stream quality drops ~40%; error recovery pipeline (MEDIA_ERROR/NETWORK_ERROR) **cut video abandonment ~28%**.
- Micro frontend: refactored Content Store from class → functional components + micro frontend architecture for improved scalability.
- Server-driven UI campaign system enabling non-technical teams to launch **milestone-based festive campaigns** independently.

EDUCATION

B.Tech, Computer Science & Engineering · APJ Abdul Kalam Technical University, UP 2016 – 2020
