Senior Frontend Engineer — Full-Stack, Architecture & AI-Assisted Engineering | Gurugram, India

PROFESSIONAL SUMMARY

Frontend-first Full-Stack Engineer, 5+ years across logistics, B2B marketplaces & edtech, spanning React/Next.js/TypeScript architecture, micro-frontend/monorepo systems, GraphQL/REST/WebSocket API integration, JWT/RBAC auth, video streaming (HLS.js/ABR/MSE), data visualization, AWS deployment (S3/CloudFront), and AI-assisted/agentive engineering (Claude Code, Claude API) for automated code review & testing. Proven quantified gains across 5M+ row datasets, 40+ countries, 10,000+ daily transactions.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, HTML5, CSS3

Frontend Frameworks: React.js, Next.js (SSR/isomorphic), Vue.js, GatsbyJS

Backend & API Integration: Node.js, REST, GraphQL, OpenAPI, WebSockets, Microservices Integration

State Management: Redux, Redux-Saga, Zustand, Apollo Client, Context API

Architecture & Auth: Micro-Frontend Architecture, Monorepo (Nx), Design Systems, Component Libraries (npm), JWT/RBAC

Styling & Data Viz (CSS-in-JS): Tailwind CSS, styled-components, SCSS/SASS, MUI, D3.js, Chart.js, ECharts, Highcharts

Video & Streaming: HLS.js, MSE, HLS/MPEG-DASH, Adaptive Bitrate (ABR), HTML5 Video API, 100ms SDK (WebRTC)

Testing & Quality: Jest, React Testing Library, Cypress, Playwright

Build, CI/CD & Cloud: Webpack, Vite, GraphQL Codegen, ArgoCD, Jenkins, GitHub Actions, AWS (S3, CloudFront CDN)

Observability & Performance: Datadog (APM), Lighthouse, Core Web Vitals, Database Performance Optimization

AI Tooling: Claude Code, Claude API, Custom AI Skills, Agentic Workflows, Git, BitBucket

Docs & Tracking: Jira, Confluence, Notion, Swagger/OpenAPI, Storybook, Markdown, Miro

WORK EXPERIENCE

Nivoda LLP — Software Development Engineer II

May 2024 – Apr 2026 | Remote

- Built custom **Claude Code** skills automating code review & test verification; pioneered **AI** tooling adoption.
- Architected an **Nx + React + TypeScript** monorepo (**GraphQL** codegen) enforcing type safety across **B2B** diamond-trading apps.
- Built an advanced diamond search & filtering **UI** (cut, color, clarity, carat, **GIA/IGI** certs) over a 2.5M+ stone catalog with live pricing.
- Shipped **Shopify/WooCommerce** catalog integrations syncing supplier inventory, certificate data & real-time stock to retailer sites.
- Led full monorepo migration to **TypeScript**, cutting frontend bugs ~25%; published reusable component libraries as **npm** packages.
- Refactored data-fetching for a 10,000+ monthly-transaction flow, cutting page load 4.2s → 1.1s via **pagination** & query optimization.
- Cut backend query time ~70% and eliminated timeouts on 50,000+ row datasets via **cursor-based pagination**.
- Designed **composite indexes** on 5M+ row tables, cutting **P95** API response time 800ms → 120ms.
- Improved hub dashboard rendering ~45% via **UI virtualization**; cut shipment-processing errors ~40% on a barcode-driven platform.
- Configured **ArgoCD + Jenkins** CI/CD across 8+ apps, cutting build times 18 → 6 min via **Nx** affected-builds & remote caching.
- Implemented **JWT** auth & **RBAC** for Admin, Candidate & Supplier personas across a marketplace serving 10,000+ retailers.
- Authored **React Testing Library** suites for critical **B2B** trading flows, cutting regression defects ~30% and stabilizing releases.

Delhivery Pvt. Ltd. — Software Development Engineer I

Aug 2022 – Apr 2024 | Gurugram, India

- Split a monolithic frontend into 5 **React** apps (Orders, Shipments, Users, Routes, Maps) + shared **MUI** library, deploys ~40%.
- Engineered tier-based dynamic switching (**Google Maps, OSM, MapMyIndia, HereMaps** SDKs), cutting operational costs up to 35%.
- Built **real-time tracking** views over a pan-India network (99.5% pin-code coverage) across express, freight & reverse-logistics flows.
- Shipped **COD** payment-collection and warehousing dashboards giving hub teams live visibility into last-mile delivery exceptions.
- Built **WebSocket-driven** live shipment interfaces, 10,000+ daily shipments, improving exception response time ~50%.
- Cut **JS** bundle ~42% (code-splitting, lazy loading, memoization); **Jest/RTL** hit 70%+ coverage, reducing regressions ~30%.
- Raised **Lighthouse** accessibility score 62 → 94 via a **WCAG 2.1 AA** audit (keyboard navigation, ARIA, color contrast).
- Built a **schema-driven** forms framework for customizable order/user schemas, reducing non-standard onboarding ~25%.
- Implemented **JWT** authentication & role-based logins for Admin, Field Executive & Hub Manager personas.
- Deployed **React** application builds to **AWS S3** with **CloudFront** CDN distribution for public, unauthenticated tracking pages.

Classplus (Bunch Microtechnologies) — Software Engineer, Frontend

Dec 2020 – Aug 2022 | Noida, India

- Architected an end-to-end **Redux + Redux-Saga** payment system for Content Store, generating primary cohort revenue.
- Built **Cypress** E2E suites covering payment/content-store journeys, catching checkout regressions and reducing bugs.
- Led Content Store migration to **Web View** with deeplink bridges to native APIs for seamless offline Android/iOS content.
- Integrated the **100ms WebRTC** SDK for interactive classes (200–500 concurrent viewers) with mid-session reconnection logic.
- Built a custom **HLS.js** player (ABR logic), cutting mid-stream quality drops ~40%; error-recovery pipeline cut abandonment ~28%.
- Refactored Content Store to functional components in a **micro-frontend**; server-driven UI let non-technical teams ship campaigns.
- Built persona-based (student/teacher) auth & access flows, supporting 100,000+ educators, ~40M students.

EDUCATION

- B.Tech in Computer Science & Engineering | APJ Abdul Kalam Technical University, UP (2016 – 2020)
